

ABOUT ME

Results-driven Full-Stack Software Engineer with a proven track record of delivering end-to-end web applications and AI-integrated systems. Adept at navigating ambiguous requirements to architect scalable backend services (**Django**, **FastAPI**), modern frontend interfaces (**React**, **Vue.js**), and robust **CI/CD** pipelines. Passionate about leveraging containerization and **LLMs** to solve complex operational bottlenecks and accelerate business workflows.

WORK EXPERIENCE

Ouch!

Junior Fullstack Software Developer

APR 2025 - PRESENT

- **End-to-End AI Integration:** Architected and deployed an AI-driven data parser and risk analysis pipeline using a **Gemini-powered React** and **FastAPI** stack with **Retrieval-Augmented Generation (RAG)**. Successfully navigated vague client requirements to deliver a solution that evaluates user data against **FM Global standards**, reducing manual input time for risk surveyors by **75%**.
- **Backend Architecture & Automation:** Developed and maintained core **Django** backend modules—including a highly-utilized claims module and robust **REST APIs**—supporting rapid new product rollouts. Engineered cron-based **automation** scripts to enforce critical business rules (e.g., **preventing advance payments and post-cut-off purchases**), **eliminating manual oversight** and **ensuring strict compliance with product lifecycles**.
- **Infrastructure & Deployment:** Containerized legacy and modern microservices using **Docker**, **standardizing local development environments** and **reducing deployment friction across testing and production servers**.

Ouch!

Software Developer Internship

JAN 2025 - APR 2025

- **Web Application Development:** Built dynamic, data-intensive web applications using **Vue.js** and **REST APIs**, focusing on efficient state management and frontend data rendering.
- **DevOps & CI/CD:** Established automated deployment pipelines by configuring **Nginx** as a reverse proxy and implementing **GitHub Actions**, accelerating release cycles and minimizing manual deployment errors.
- **Environment Standardization:** Packaged applications into **Docker** containers to ensure 100% parity between development and production environments, enhancing project portability.

EDUCATION

BSC (HONS) in Computer Science @ Sunway University

Graduated at APR 2025

- **Capstone Project (EduCore):** Engineered a **Flask-based** machine learning recommendation engine that matches students with university courses based on employment trends and market demand, aimed at optimizing career outcomes for low-income students.

SKILLS

Programming Languages: Python, JavaScript

Backend: Django, FastAPI, Node.js, REST APIs

Frontend: React, Vue.js

Databases & ORM: PostgreSQL, Prisma ORM, Django ORM

Cloud & DevOps: Docker, Google Cloud Platform, Cloud Run,

Cloud SQL, GitHub Actions, Nginx

AI Tools: Gemini API, Prompt Engineering, Gemini CLI, Claude Code

Version Control: Git, GitHub

LANGUAGES

Languages: English, Mandarin, Cantonese, Malay, Hokkien
