

ABOUT ME

A full-stack software developer with hands-on experience building backend APIs, frontend interfaces collaboratively. Dockerized applications and developed AI-integrated systems. Experienced with **Django**, **FastAPI**, **React**, **Vue.js**, **PostgreSQL**, and **Google Cloud Platform**, with a strong interest in building scalable, production-ready software for regional and global teams.

WORK EXPERIENCE

Ouch!

Junior Fullstack Software Developer APR 2025 - PRESENT

- Developed and maintained **Django** backend modules for production features, including a claims module, **REST API** endpoints, database models, and service-layer logic to support new product requirements.
- Created backend automation scripts to update user statuses after product closing dates, reducing manual follow-up work and improving operational accuracy.
- Containerized backend and frontend services with **Docker**, resolving team setup issues and improving environment consistency across local development, testing, and deployment.
- Built **Gemini**-powered **React** and **FastAPI** application for **RAG**, data extraction and data analysis, reducing manual input time for risk surveyors by approximately 75%.
- Connected frontend workflows with backend API logic to extract key survey fields and support knowledge-base-driven analysis, helping reduce manual calculations and improve workflow efficiency.

Ouch!

Software Developer Internship JAN 2025 - APR 2025

- Built a Pokédex web application using **Vue.js** and PokeAPI, gaining hands-on experience with **REST API** integration, dynamic data rendering, and frontend data handling.
- Containerized the application with **Docker** to maintain consistent development environments and improve project portability.
- Configured **Nginx** as a reverse proxy and implemented **GitHub Actions** for automated deployment, gaining exposure to basic DevOps and CI/CD workflows.

EDUCATION

Sunway University **BSC (HONS) in Computer Science** EduCore - Course Recommender System

- Developed a **Flask-based** course recommender system that suggests courses based on students' field of interest, personal background, and current job market demand.
- Designed the system to support students from low-income families by helping them make more informed course choices and reduce the risk of selecting career paths with limited employment opportunities.
- Implemented recommendation logic using machine learning techniques to match student interests with courses that align with employability trends and industry skill demand.

SKILLS

Programming Languages: Python, JavaScript

Backend: Django, FastAPI, Node.js, REST APIs

Frontend: React, Vue.js

Databases & ORM: PostgreSQL, Prisma ORM, Django ORM

Cloud & DevOps: Docker, Google Cloud Platform, Cloud Run, Cloud SQL, GitHub Actions, Nginx

AI Tools: Gemini API, Prompt Engineering, Gemini CLI, Claude Code

Version Control: Git, GitHub

LANGUAGES

Languages: English, Mandarin, Cantonese — Professional working proficiency; Malay — Conversational
